Dear review committee,

I am currently pursuing his Masters in Software Engineering with concentration in Cloud Technologies at San Jose State University. I can start working as full time after my internship if needed. I am excited to make a difference as **Software Engineering Intern** at **Salesforce** for Summer-2018.

Prior to graduate school, I have 5 years of experience building software applications for client companies while working with Deloitte Consulting and TCS in India. I worked as full stack developer, taking care of data and software needs of clients from domains ranging from health care to finance.

My area of expertise lies in web and mobile developement, SQL, Java, data structures, cloud technologies like AWS and Heroku. I have hands on working experience in web technologies like NodeJS, ReactJS, Javascript (ES6) and mobile development platforms like Android and iOS. I have also worked with relational (Oracle, MySQL, SQL Server) as well as NoSQL databases (MongoDB, Cassandra)

Given an opportunity to work with the **Software Engineering** team at **Salesforce**, I will bring with me my experience of working with diverse clients, along with skills of effective communication and coordination. Additionally, I shall be able to grasp several new skills and approaches while working with some of the world's best professionals, which in turn will help me make my experience with **Salesforce** more effective.

Looking forward to work with you.

**Sunil Tiwari**
